EMPLOYMENT HISTORY

Newtech
Software Eng

Santo Domingo, Distrito Nacional
August 2016 - July 2018

I was in a team that was responsible for designing and implementing some of the features within Verizon Wireless. Working under a customer relationship management named SalesForce with developers and PM's was a great experience. My responsibility included developing some web components based on Lightning Design which is a framework to create single page applications.

Coderghost
JavaScript Developer

Santo Domingo, Distrito Nacional
August 2018 - November 2018

My function in this company was to create a Content Management System from scratch using only JavaScript as the main programming language. As a developer I programmed the dashboard used to manage the data in the system. Some of the tasks implemented were:

1. Design the DataBase Schema.
2. Code the back-end.
3. Design the front-end.
4. Deploy the project.

UTESA university
C# - Project Development

Santo Domingo, Distrito Nacional
June 2016 - July 2016

This was a freelance project where I had to create a matriculation system to control some of the students data. Under an Agile/Scrum methodology I was able to agree with the client and implement the back-end using C# as the main programming language.

EDUCATION

ITLA
Java Programming Language

Santo Domingo, Distrito Nacional
Graduated March 2016

ITLA
Programming Introduction

Graduated March 2012

Mescyt
English Immersion Program

Santo Domingo, Distrito Nacional
Graduated November 2012

Dominico Frances
High School

Punta Cana, La Altagracia Province
Graduated June 2009

PROFESSIONAL SKILLS

NodeJs	Expert
Express JS	Expert
React JS	Expert
Redux	Expert
Firebase	Intermediate
Angular 2+	Expert
Jquery	Expert
HTML	Expert
Bootstrap	Advanced
Java	Advanced
JSP/Servlet	Advanced
Jersey (RestFul)	Advanced
SQL	Advanced
Git	Expert

PROJECTS

React JS - SignIn/SignUp, June, 2018.

As a React JS developer I have created some of the most common components like SignUp/SignIn. The data used to be validated by a helper created by myself under JavaScript. The main functionality was to control the public routes and private routes of an endpoint empowered by a JWT.

Node JS - MySQL, Nov. 2018.

I decided to implement a service under Node JS and Express JS using MySQL as the main DataBase. In this project I had responsibility of using promise-mysql, a wrapper for mysqljs under Node JS. One of the biggest functionality was the connection pool to manage all of the connections process to the DataBase.
